NOTES

Cumulative wind farm sites are shown only to 25 km.

The ZTV is calculated to turbine blade tip height (149.9m) from a viewing height of 2m above ground level.

The terrain model assumes bare earth and is derived from OS Terrain 50 height data (obtained from Ordnance Survey July, 2024).

Earth curvature and atmospheric refraction have been taken into account. The ZTV was calculated using ArcGIS Pro 3.2.1.
